Why You Should Get The COVID-19 Vaccine If You Are Pregnant

Frequently Asked Questions with Sources

In Canada and across the world, the burden of the pandemic has rapidly increased due to the highly infectious variants.

An increasing number of pregnant patients infected with COVID-19 are being admitted to intensive care units (ICU).

ICU care is for a hospital’s sickest patients. It entails life-sustaining measures including intubation, ventilation, oxygen, medications that maintain blood pressure, and extensive monitoring by teams of health care professionals.

While most people from the general population with COVID-19 experience mild illness, otherwise healthy pregnant patients with COVID-19 are getting very sick, very quickly.

As of April 20, 2021, 30% of Sinai Health ICU patients were pregnant or postpartum patients.

(Dr. Wendy Whittle, Sinai Health)

In cases of severe illness, emergency C-sections are being performed in the ICU for both maternal and fetal safety.

The Society of Obstetricians and Gynaecologists of Canada (SOGC) supports the use of all available COVID-19 vaccines approved in Canada in any trimester of pregnancy and during breastfeeding in accordance with regional eligibility.

No clots in > 99% of vaccine recipients.

Arterial and venous thrombosis associated with low platelets events following the adenovirus vector COVID-19 vaccines (AstraZeneca, COVISHIELD, Janssen) occur in as few as 1 in every 125,000 to 1 in 1 million people.

Preliminary findings do not show obvious safety concerns among pregnant persons who received vaccination.
1) Increase maternal vaccine-specific IgG antibodies. These can get across to help protect baby after delivery as long as you get the vaccine at least 3 weeks before delivery.

2) Increase vaccine-specific IgA antibodies which in breast milk provides mucosal protection from COVID19 for your baby.

There are other vaccines recommended in pregnancy for similar reasons. These include: Influenza, Tdap (Whooping cough), and more.

The vaccine has now been shown to:

The Bottom Line

Every medical decision should be made after weighing the risks and benefits for yourself with the input of a medical professional.

However, with widespread community transmission of the virus variants, understand that the risk of getting very sick with COVID19 is peaking.

GET VACCINATED.

Take the first vaccine you are offered.
Especially if you are pregnant.
